Site Reference ID/Investigator# 116438, Morgantown, West Virginia, United States
Site Reference ID/Investigator# 116439, Madison, Wisconsin, United States

This is a point prevalence study conducted entirely in the United States (US) to establish the prevalence of antibodies to hepatitis E virus (HEV) and other selected porcine viruses in cystic fibrosis (CF) patients receiving pancreatic enzyme replacement therapy (PERT) for pancreatic insufficiency compared with matched (age and region of residence) control patients with chronic medical conditions unexposed to PERT.
